MIST-CONTROL®

DEPOSITION AID AND DRIFT CONTROL AGENT FOR PESTICIDE SPRAYS

PRINCIPAL FUNCTIONING AGENT:

Polyvinyl polymer ................................................................. 2%
Constituents Ineffective as Spray Adjuvants ............................... 98%

Total.................................................................100%

Proprietary Protected Technology
Calif. Reg. No. 90930-50011

KEEP OUT OF REACH OF CHILDREN

PRECAUTIONARY STATEMENTS
Hazards to Human and Domestic Animals

Avoid prolonged or repeated contact with skin. Wash thoroughly after handling this product. Do not get in eyes. Do not breathe vapor or mist. Do not swallow.

PERSONAL PROTECTIVE EQUIPMENT
If exposure limits are exceeded, or if exposure may occur, use a NIOSHA/MSHA approved respirator. Wear chemical goggles or face shield, rubber gloves, rubber boots, and clean protective clothing.

FIRST AID
If in eyes: Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
If inhaled: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.
If ingested: If swallowed, DO NOT induce vomiting. Rinse mouth with water. Dilute stomach contents by drinking water. If vomiting occurs spontaneously, keep head below hips to prevent breathing vomit into lungs. NEVER GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON. Call a physician immediately!

Manufactured By
MILLER CHEMICAL & FERTILIZER, LLC
P.O. Box 333
Hanover, Pennsylvania 17331

Net Contents: 1 Gallon Liquid
GENERAL INFORMATION

**MILLER MIST-CONTROL** is an effective, easy to use product for drift retardation and deposition improvement in spraying operations. When used in accordance with label instructions and applied with sound technology, **MILLER MIST-CONTROL** will effectively improve deposition within the intended swath area. **MILLER MIST-CONTROL** will reduce somewhat, but not completely eliminate, all spray mist responsible for drift when used as a deposition aid. **MILLER MIST-CONTROL** is compatible with WEATHERMAX™.

DIRECTIONS FOR USE

**IMPORTANT:** Keep container closed in storage and do not allow water to come in contact with contents until added to the spray solution.

Step 1: Select correct dosage from chart below.
Step 2: Fill mix tank with water and agitate.
Step 3: Always add wettable powder pesticides before **MILLER MIST-CONTROL** and liquid pesticides after **MILLER MIST-CONTROL**. Be sure that wettable powders are completely dispersed before adding **MILLER MIST-CONTROL**. Pour the correct amount of **MILLER MIST-CONTROL** slowly into most turbulent area in the tank or on the surface during tank filling. **MILLER SPRAY-AIDE®** may be added to the spray tank before **MILLER MIST-CONTROL** if water acidification is needed. Spray tank pH should be lower that pH 11 for **MILLER MIST-CONTROL** maximum efficiency.

Step 4: If additional spray tank additives are used, such as NU FILM 17®, NU FILM P® or FOAM FIGHTER®, they should be added after **MILLER MIST-CONTROL**.
Step 5: Continue to agitate tank mix for at least 2 minutes before spraying.

**NOTE:** If too much **MILLER MIST-CONTROL** is added, resulting in the tank mix becoming thick, the viscosity can be reduced by adding 1 to 2 lbs. of table salt (sodium chloride) per 100 gallons of spray mix.

**MILLER MIST-CONTROL USE PRECAUTIONS**

The degree of drift hazard varies with the type of pesticide, application conditions, and vegetation near the sprayed area. Consult your local agricultural advisor. Remember, pesticide drift is no accident. Common sense and sound application technology must be followed when spraying pesticides. **MILLER MIST-CONTROL** will retard, but not totally eliminate drift. Drift minimization is the responsibility of the applicator. The following is a summary of recommended procedures for reducing drift damage which should always be followed. Most important though, if there is any element of doubt about an application that might result in harmful drift, wait until the element of doubt is removed or do not make the application.
Summary of Recommended Procedures For Reducing Drift Damage
(For reducing drift damage is the responsibility of the applicator)

<table>
<thead>
<tr>
<th>Recommended Procedure</th>
<th>Example</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Select nozzle type that produces droplets</td>
<td>Raindrop, low-pressure flat fan, flooding</td>
<td>Use as large droplets as practical to provide coverage necessary.</td>
</tr>
<tr>
<td>Use lower end of pressure</td>
<td>Use 20 to 40 psi for Raindrop. Less than 25 psi for other nozzle types.</td>
<td>Higher pressures generate many more small droplets (less than 100 microns).</td>
</tr>
<tr>
<td>Lower boom height</td>
<td>Used as low boom height as possible to maintain uniform distribution. Use drops for systemic, or contact herbicides in corn.</td>
<td>Wind speed increases with height. A few inches lower boom height can reduce off-target drift.</td>
</tr>
<tr>
<td>Increase spray volume</td>
<td>If normal gallonage is 15 to 20 GPA, increase to 25 to 30 GPA</td>
<td>Larger capacity nozzles will reduce spray depositing off-target.</td>
</tr>
<tr>
<td>Spray when wind speeds are less than 10 MPH and moving away from sensitive plants</td>
<td>Leave a buffer zone if sensitive plants are downwind. Spray buffer zone when wind changes.</td>
<td>More of the spray volume will move off-target as wind increases.</td>
</tr>
<tr>
<td>Do not spray when the air is completely calm or an inversion exists</td>
<td>Inversions generally occur in early morning or near bodies of water.</td>
<td>Calm air or inversions reduce air mixing, and spray can move slowly downwind.</td>
</tr>
</tbody>
</table>

ENVIRONMENTAL PRECAUTIONS: This product is not for aquatic use. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters.

STORAGE AND DISPOSAL
Keep in original container. Store above 32º F. For help with any spill, leak, fire or exposure involving this material, call day or night CHEMTREC (800) 424-9300.

CONTAINER DISPOSAL
Triple rinse (or equivalent) during mixing or loading. Recycling decontaminated containers is the best option of container disposal. The Agricultural Container Recycling Council (ACRC) operates the national recycling program. To contact your state and local ACRC recycler visit the ACRC web page at www.acrecycle.org. Decontaminated containers may also be disposed of in a sanitary landfill.

The use of this material being beyond our control and involving elements of risk to human beings, animals, and vegetation, we do not make any warranty, express or implied, as to the effects of such use, when this product is not used in accordance with the directions as stated on this label.

WARRANTY: MILLER CHEMICAL & FERTILIZER, LLC. warrants that this product when used as directed and in accordance with sound agricultural practices will retard drift and improve deposition in spraying operations which utilize water based and water emulsifiable solutions. MILLER CHEMICAL & FERTILIZER, LLC. MAKES NO WATTANTY OF FITNESS OR MERCHANTABILITY.

PA Right-To-Know: This product contains proprietary ingredient(s).
WA State Only – Not for aquatic use.
